Digital filters are more flexible than real ones.

The Ultimate Guide to Filters for Landscape Photography

By Robert Correll Filters (sometimes called optical or physical filters) work by literally getting in the way. You stick filters on the front of or in your dSLR lens so that light from the outside world has to pass through on its way to the camera's sensor — simple stuff. As light passes through a filter, something magic happens.

Filter Systems for Your Digital SLR - dummies

Filter Guide Dslr The size of the filter that you get must match the diameter of your lens, since the filter will screw onto the front of the lens. If every filter is matched to a lens size, what do you do when you have two different size lenses?

Filter Guide Dslr - mitrabagus.com

First of all, there are two basic types of filters: screw-in and drop-in. The former mount directly onto the lens via the threads on the front, whereas the latter drop-in type are square or rectangular in shape, and require a filter holder and mounting ring that attaches to the front of the lens.

Beginner's Guide to Buying Filters

This filter, as well as the CLS-CCD filter, are offered in standard 1.25" and 2" cells as well as clip-in format for select Canon and Nikon DSLR cameras. The well-regarded IDAS LPS filter also works well to balance color and reduce the effects of light pollution.

A Guide to Imaging Filters - Agena AstroProducts  
Each one of these filters will only allow a specific range of wavelengths through to your camera. The Blue filter will let 400nm – 500nm through. The Green filter will let 500nm – 600nm through. The Red Filter will let 600nm – 700nm through. Finally, the Luminance filter will let the full range from 400nm – 700nm through. If you are using a monochrome camera, all of these photos will be black and white.

Peter Zelinka | A Guide to Astrophotography Filters  
In my mind, the filter that produces consistent usable data from your location is the one you'll use most. If you are currently shooting with a stock Canon DSLR camera (that has not been "astro-modified") such as the Canon EOS T6i, T7i, etc., I suggest the affordable Astronomik CLS filter (clip-in). This filter has a proven track record of consistent results under city light pollution, and one of the first light pollution filters I used with my camera.

How to Choose a Light Pollution Filter for  
Astrophotography
