Medicinal Plants of the World: Volume 1: Chemical ...

Medicinal plants and plant-derived medicine are widely used in traditional cultures all over the world and they are becoming increasingly popular in modern society as natural alternatives to synthetic chemicals. As more and more natural remedies are being commercialised, there is a need for a user-friendly reference guide to the plants and their products. The book gives the reader a bird's eye view of more than 350 of the best known medicinal plants of the world and their uses, in a compact, colourful and scientifically accurate reference text. It provides quick answers to the most obvious questions: Where does this plant originate? What does it look like? In which culture is it traditionally used? What is it used for? Which chemical compounds does it contain? How safe is it? What is known about its pharmacological activity? What evidence is there that it is effective? The authors also provide short overviews of the various health conditions for which medicinal plants are used and the active compounds (secondary metabolites) found in the plants and their modes of actions. This new edition has an additional 30 plant species, many new and improved photographs and the text has been fully updated to reflect the latest regulatory status of each plant.

Ivan Ross takes advantage of the significant growth in the amount of new data available to update and expand his much acclaimed Medicinal Plants of the World: Chemical Constituents, Traditional and Modern Medicinal Uses, Volume 1. This considerably enhanced second edition contains new research and references on the immunomodulatory activity present in Allium sativum, Mangifera indica, and Punica granatum, the antidiabetic effects of Momoridica charantia and Mucuna pruriens, the antiinflammatory activity found in Mangifera indica and Arbus precatorius, the cholesterol lowering effect of Allium sativum and Moringa pterygosperma, and the anti tumor effect of Arbus precatorius and Moringa pterygosperma. There are also important new findings concerning the antihperes simplex virus activity of Mangifera indica, the anti-Parkinson's activity of Mucuna pruriens, the antiviral activity in Phyllanthus niruri and Jatropa curcas, the hyperthyroid regulation properties of Moringa pterygosperma, and the antioxidant activity of Mangifera indica, Punica granatum, Psidium guajava, and Allium sativum. Allium sativum is highlighted for its treatment of unstable angina pectoris, sickle red blood cell dehydration inhibition, senescence ameliorative, chemoprotective, cardiovascular, antineoplastic, anticarcinogenic, and antiatherogenic effects. This revised and enhanced edition provides details on traditional medicinal uses, chemical constituents, pharmacological activities, clinical trials, color illustrations, Latin names, botanical descriptions, as well as providing an index and extensive bibliographies. Authoritative and exhaustively compiled, Medicinal Plants of the World: Chemical Constituents, Traditional and Modern Medicinal Uses, Volume 1, 2nd Edition offers pharmacists, physicians, medicinal chemists, toxicologists, and phytochemists a universal reference on twenty-six of the most widely used medicinal plants in the world.

Illustrations of medicinal plants are accompanied by descriptions of their physical structure and therapeutic effect.

An extraordinary compendium of information on herbal medicine, Medicinal Plants of the World, Volume 2 comprehensively documents the medicinal value of twenty-four major plants species widely used around the world in medical formulations. The book's exhaustive summary of available scientific data for the plants provides detailed information on how each plant is used in different countries, describing both traditional therapeutic applications and what is known from its use in clinical trials. A comprehensive bibliography of over 3000 references cites the literature available from a wide range of disciplines. This book offers an unprecedented collection of vital scientific information for pharmacologists, herbal medicine practitioners, drug developers, medicinal chemists, phytochemists, toxicologists, and researchers who want to explore the use of plant materials for medicinal and related purposes.

This important reference describes the traditional medicinal uses, the chemical constituents, the pharmacological activities and the clinical trials of plants that are commonly used throughout the world as medicine.

A resource organized by body system lists the key herbal remedies available, their uses and cautionary advice, in a book that includes full-color photos, a glossary and several thematic indexes.

Medicinal and aromatic plants (MAPs) have accompanied mankind from its very early beginnings. Their utilization has co-evolved with homo sapiens itself bringing about a profound increase in our scientific knowledge of these species enabling them to be used in many facets of our life (e.g. pharmaceutical products, feed- and food additives, cosmetics, etc.). Remarkably, despite the new renaissance of MAPs usage, ca. 80 % of the world's population is relying on natural substances of plant origin, with most of these botanicals sourced from the wild state. This first volume and ultimately the series, provides readers with a wealth of information on medicinal and aromatic plants.
