proves that energy is truly the engine of global political and economic change. From the jammed streets of Beijing, the shores of the Caspian Sea, and the conflicts in the Middle East, to Capitol Hill and Silicon Valley, Yergin tells the inside stories of the oil market, the rise of the 'petrostate', the race to control the resources of the former Soviet empire, and the massive corporate mergers that have transformed the oil landscape. He shows how the drama of oil - the struggle for access to it, the battle for control, the insecurity of supply, its impact on the global economy, and the geopolitics that dominate it - will continue to shape our world. And he takes on the toughest questions: will we run out; are China and the United States destined for conflict; what of climate change? Yergin also reveals the surprising and turbulent histories of

nuclear, coal, and natural gas, and investigates the 'rebirth of renewables'- biofuels, wind, and solar energy - showing how understanding this greening landscape and its future role are crucial to the needs of a growing world economy. The Quest presents an extraordinary range of characters and dramatic stories to illustrate the principles that will shape our energy security system for the decades to come. It is essential reading.

The Prize recounts the panoramic history of oil -- and the struggle for wealth power that has always surrounded oil. This struggle has shaken the world economy, dictated the outcome of wars, and transformed the destiny of men and nations. The Prize is as much a history of the twentieth

century as of the oil industry itself. The canvas of this history is enormous -- from the drilling of the first well in Pennsylvania through two great world wars to the Iraqi invasion of Kuwait and Operation Desert Storm. The cast extends from wildcatters and rogues to oil tycoons, and from Winston Churchill and Ibn Saud to George Bush and Saddam Hussein. The definitive work on the subject of oil and a major contribution to understanding our century, The Prize is a book of extraordinary breadth, riveting excitement -- and great importance.

world works.” —NPR Pulitzer Prize-winning author and global energy expert, Daniel Yergin offers a revelatory new account of how energy revolutions, climate battles, and geopolitics are mapping our future The world is being shaken by the collision of energy, climate change, and the clashing power of nations in a time of global crisis. Out of this tumult is emerging a new map of energy and geopolitics. The “shale revolution” in oil and gas has transformed the American economy, ending the “era of shortage” but introducing a turbulent new era. Almost overnight, the United States has become the world's number one energy powerhouse. Yet concern about energy's role in climate change is challenging the global economy and way of life, accelerating a second energy revolution in the search for a low-carbon future. All of this has been made starker and

World politics is being upended, as a new cold war develops between the United States and China, and the rivalry grows more dangerous with Russia, which is pivoting east toward Beijing. Vladimir Putin and China's Xi Jinping are converging both on energy and on challenging American leadership, as China projects its power and influence in all directions. The South China Sea, claimed by China and the world's most critical trade route, could become the arena where the United States and China directly collide. The map of the Middle East, which was laid down after World War I, is being challenged by jihadists, revolutionary Iran, ethnic and religious clashes, and restive populations. But the region has also been shocked by the two

Economic growth and burgeoning populations have put South Asia's energy security in a perilous state. Already energy and power shortages are stunting development in some of the region's least developed locations spurring political insurgences and social dislocation. Should this trend continue, Ebinger argues the Subcontinent will face dire economic, social and political crises. In *Energy and Security in South Asia*, Brookings ESI director Charles Ebinger, a long-time adviser to South Asian governments, lays out the current regional energy picture arguing that the only way to achieve sustainable energy security is through regional collaboration both within the subcontinent as well as with regional neighbors in the Middle East and Central and Southeast Asia,

Dr. Ebinger commences by illustrating the present-day energy environment in each nation as well as the obstacles governments confront in addressing them. Among the issues examined are: (1) the technical strains that near double-digit economic growth are putting on India's dilapidated power infrastructure, (2) the economic costs the country is incurring by increasing reliance on the Middle East for oil and gas resources; (3) the prospects for expanded wind, solar, energy efficiency and nuclear power generation in India to help reduce the nation's growing carbon footprint as it accelerates the use of coal; (4) the implications of Pakistan's expanded use of coal; (5) an analysis of how poor energy pricing systems are bringing about an energy shortage throughout the region (6) an examination of how strains in Indo/Bengali

relations threaten the construction of vital regional energy infrastructure projects; (7) a discussion of how continued political upheaval in Nepal is causing power shortages of up to 20 hours per day; and (8), an analysis of how hydropower development is fuelling Bhutan's "Gross National Happiness" campaign. In addition to individual domestic concerns, each nation shares a crisis whereby hundreds of millions on the Subcontinent lack access to electricity and burn inefficient resources such as fuel wood and biomass for lighting, heating, and cooking, thus contributing sizeable carbon emissions. The looming Indian Subcontinent energy crisis will force more than half a billion people – and counting—from emerging from dire poverty, thus potentially sparking domestic and regional instability in an already treacherous

This book examines the development of bilateral energy relations between China and the two oil-rich countries, Kazakhstan and Russia. Challenging conventional assumptions about energy politics and China's global quest for oil, this book examines the interplay of politics and sociocultural contexts. It shows how energy resources become ideas and how these ideas are mobilized in the realm of international relations. China's relations with Kazakhstan and Russia are simultaneously enabled and constrained by the discursive politics of oil. It is argued that to build collaborative and constructive energy relations with China, its partners in Kazakhstan, Russia, and elsewhere must consider

not only the material realities of China's energy industry and the institutional settings of China's energy policy but also the multiple symbolic meanings that energy resources and, particularly, oil acquire in China. China's Energy Security and Relations with Petrostates offers a nuanced understanding of China's bilateral energy relations with Kazakhstan and Russia, raising essential questions about the social logic of international energy politics. It will appeal to students and scholars of international relations, energy security, Chinese and post-Soviet studies, along with researchers working in the fields of energy policy and environmental sustainability.

Windfall is the boldest profile of the world's energy resources since Daniel Yergin's *The Quest*, asserting that the new energy abundance—due to oil and gas resources once deemed too expensive—is transforming the geo-political order and is boosting American power. “Riveting and comprehensive...a smart, deeply researched primer on the subject.” —The New York Times Book Review As a new administration focuses on driving American energy production, O'Sullivan's “refreshing and illuminating” (*Foreign Policy*) *Windfall* describes how new energy realities have profoundly affected the world of international relations

and security. New technologies led to oversupplied oil markets and an emerging natural gas glut. This did more than drive down prices—it changed the structure of markets and altered the way many countries wield power and influence. America's new energy prowess has global implications. It transforms politics in Russia, Europe, China, and the Middle East. O'Sullivan considers the landscape, offering insights and presenting consequences for each region's domestic stability as energy abundance upends traditional partnerships, creating opportunities for cooperation. The advantages of this new abundance are greater than its downside for the US: it strengthens American hard and soft power. This is “a powerful argument for how America should capitalise on the ‘New Energy Abundance’” (The Financial
